

Budgety – AI-First Financial Coach: MVP & Demo Product Requirements Document

The goal of this MVP project is to develop Budgety — an AI-first financial coach designed for Gen Z users.

Budgety proactively guides users through their financial journey using a dynamic, conversational experience that replaces static dashboards with an interactive chat that feels personal, relatable, and smart. The MVP focuses on

two primary pillars: 1. ****UI/UX Redesign:**** Creating a seamless, visually engaging, and culturally relevant experience that resonates with Gen Z. 2. ****Custom GPT Development:**** Building a live, personality-driven conversational AI that adapts to users' goals and financial behaviors. A third pillar — ****Non-Core Features /**

Parking Lot** — captures future enhancements such as detailed dashboards, terms, and integrations.

Milestones

****Milestone 1: Core MVP — Conversational Financial Coach**** Deliver a functional AI-powered chat experience

with Budgety that interacts conversationally, gathers user context, and provides proactive financial guidance

using dummy data. Key Components: - Chat-based onboarding (“First Date with Budgety”) - Personality-driven

interactions (Gen Z tone, meme-aware, friendly) - Agentic coaching with adjustable initiative levels - Dummy data

simulation for spending and savings insights - Flexible data input (manual or optional bank connection)

****Milestone 2: Visual Dashboard + Weekly Check-ins**** Complement the chat experience with simple visuals and

regular engagement loops. Key Components: - Lightweight dashboard (spending, net worth, money vibe score) -

Weekly AI-led financial check-ins - Benchmarking vs peers in age/region - Goal tracking (short-term & long-term)

Streamlining Onboarding and Data Integration

- ****Simplified Onboarding:**** Use passkey technology (Apple ID, Google, Interac Verified) to reduce friction. -

****Flexible Data Options:**** Allow users to input financial data manually for privacy and accessibility. -

****Aggregated Insights:**** Even with dummy data, simulate multi-account aggregation for holistic overviews.

Optional Intake Flow for Financial Goals

Create a light, conversational intake flow to understand user goals, mindset, and priorities.

Captured Parameters:

- Short vs long-term goals - Risk appetite (conservative vs adventurous) - Priorities (travel, moving out, supporting family, etc.) The intake can occur during the first chat or via early recommended prompts. Tone:

Authentic, casual, “first date” energy — distinctly non-corporate.

Demo & Core Prompts

Develop 7–10 core conversational pathways for demo and testing: 1. How am I doing compared to others my

age? (Benchmarking) 2. Help me plan for a trip / moving out / university. 3. What’s the smartest way to split my

paycheck? 4. Weekly check-in: “How did I do this week?” 5. What’s my net worth trend? 6. How can I save for

[goal]? 7. What’s my spending vibe this month? Emphasis: Weekly check-ins, benchmarking, and net worth

tracking as key demo flows.

Defining the Custom GPT Persona: 'Budgety'

Budgety’s personality embodies a trusted yet fun Gen Z financial coach — friendly, empathetic, and culturally

fluent. Key Traits: - Tone: Relatable, humorous, encouraging - Personality Spectrum: Chill

Advisor nnnn →

Agentic Coach n - Content Awareness: Integrates trending TikTok/YouTube creators for educational content -

Trust Markers: Cites verified financial influencers and credible sources

Non-Core Features / Parking Lot

These features are acknowledged but deprioritized for MVP demo delivery: - Detailed terms & conditions flow -

Complex dashboards and reporting - Real bank API integrations (Plaid, MX, etc.) -

Social/community layer

MVP KPIs

Metric Target

User Retention (7-day) 40%+

Onboarding Completion Rate 80%

Agentic Mode Adoption 50%+

Weekly Check-in Participation 60%+

User NPS >30

Next Steps

- Finalize 7–10 conversational prompt pathways and UI mockups - Implement dummy data layer for demo realism

- Build passkey onboarding and chat-based goal intake - Integrate GPT with Budgety’s tone and behavioral logic

- Prepare working demo for investor presentation
